

## NB1098 – ØSTERFJORD

Østerfjord has the latest solutions and technology in the fields of propulsion, power generation, fishing efficiency and processes, crew safety and comfort. With her propulsion system being a hybrid one with both diesel mechanical, diesel electric and pure electric propulsion options, she provides energy efficiency. Beside its innovative propulsion setup, she is the first purpose-built vessel combining two different fishing methods; longlining and Danish seining which provide the vessel flexibility to catch its quotas. The vessel has also a moon-pool for safe operation in all weather conditions and increased catch rates.
